GEE – GLOBAL ELEVATOR EXHIBITION

The international exhibition dedicated to the **elevator, escalator, moving walkway and component** industry, offering a range of solutions to meet every need.

GEE seeks to represent and promote **quality, safety** and the highest **technical standards**, as well as providing design solutions to help drive mobility and accessibility towards a **sustainable** future in which the progress of the sector is integrated into the development of urban centres.

It is organised by **Fiera Milano** in Milan, the capital of technological innovation, and Italy's leading **SmartCity**.

BACKGROUND

Industry trends are rapidly evolving to meet modern buildings' increasingly complex and sophisticated requirements, the growing demand for efficient and safe solutions and products that are constantly developing and modernising. New trends have emerged in recent years, with one of the most evident the adoption of advanced technologies such as smart and connected elevators. Sustainability has become an increasingly relevant and pressing issue and we have also seen a significant transformation in the design, performance, and functionality of elevators. Trends, innovation, technology and sustainability take centre stage at GEE 2025.
